**خلاصه مقاله:**

In this work, we present and comment some results from our recent paper [٢] on efficiency on slacksbasedDEA problem with integer interval data. To this matter, a new approach consisting of two phases isproposed, considering integer interval arithmetic and partial orders. The new method is illustrated andapplied to a dataset from the literature.

**کلمات کلیدی:**

Efficiency, integer DEA, interval data, production possibility set, slacks-based mode
